Full Stack Developer

I'm a proven developer with 7+ total years of working for paying clients. I've spent 4.5 years as a full-time developer with a startup company. Before I went full time I spent my time doing contract work for companies in my area. I would build out whatever they needed done. The languages and tooling would be either discussed before build time, or left to me to find what works. This led to constantly learning new tooling and languages on the fly, which was where I liked to be! I've created paid projects from ideas all the way to deployment, architecting, designing, building, testing, and deploying.

EXPERIENCE

Full Stack Developer, Storysoft LLC

Apr 2022 – Sep 2026 · Remote

A startup environment where goals changed regularly, conventions weren't set, and patterns weren't defined. Flexibility and innovation were key to success here.

- Created custom 'Stories' (microsites with analytics) for pharma companies, built with a mix of Vue and JavaScript (later upgraded to TypeScript).
- Built APIs to handle calls from the different platforms.
- Integrated auth layers, AWS, OIDC, OAuth, and more.
- Create specialized tooling for day-to-day tasks using Python scripts and .NET desktop applications.
- Create programs clients could drop into their own sites with a script tag to play the microsites there, either a gallery of multiple Stories or a single one.

Used every day for 4.5 years: Vue, JavaScript, TypeScript, HTML, CSS/SCSS, Bootstrap, C#, ASP.NET MVC, AWS, S3, CI/CD, Docker, plus many one-off tools for special projects.

Software Engineer, NAPA Auto Parts (Contract)

Jan 2022 – Feb 2022 · Cambridge, OH

- Built out a customer invoice portal for a store owner.

Learned for this contract: React, Firestore, Firebase Auth, and various Python libraries to allow for scanning.

Software Engineer, ACI Services (Contract)

Jan 2019 – Feb 2021 · Cambridge, OH

- Built an ASP.NET MVC/SQL Server quoting site for their sales team.
- Fulfilled an order for a browser-based tag printer tool (jQuery, JavaScript, SQL, Razor Pages, MVC, C#) for the shop engineers to make the tags that go on the compressors. The UI/UX had to be friendly enough for welders and machinists to navigate and complete their work in.
- Worked with their in-house senior developer to meet timelines and expectations, as well as to push back on scope creep from time to time.

Store Manager, NAPA Auto Parts

Apr 2014 – Apr 2022 · Cambridge, OH

Ran the store, created orders, made daily operations more efficient, and drove sales before moving to development full time.

SKILLS (many more not listed for brevity)

Frontend	Vue 3, TypeScript, JavaScript, React, HTML/CSS/SCSS, Bootstrap, jQuery, Web Components, Lottie
Backend	.NET / C#, ASP.NET MVC, Razor Pages, Node.js, REST APIs, Python, OIDC / OAuth
Data & Cloud	MongoDB, MySQL, SQL Server, Firebase, AWS, S3, Docker, CI/CD, AWS CodePipeline, Bitbucket Pipelines
AI Tools	Claude / Claude Code, ChatGPT, GitHub Copilot
Practices	Git, Agile, unit testing, analytics integration, SDK onboarding and intern training, MLR-compliant pharma tooling

Authorized to work in the US for any employer.
