Full Stack Developer

jankrodev.netlify.app · github.com/JankroDev · [LinkedIn](#)

Full stack developer with four years on Storysoft's healthcare marketing platform and seven years shipping software for paying customers. At Storysoft I build the Story Builder editor, the embeddable Webframe and Player custom elements, and the analytics that connect them, on a Vue 3, TypeScript, .NET/C#, MongoDB, and AWS stack. Before that I delivered custom line-of-business software for NAPA Auto Parts and ACI Services that is still in daily use.

EXPERIENCE

Full Stack Developer, Storysoft LLC

Apr 2022 – Present · Remote

Digital experience platform for pharma brands and their agencies (HCP and patient Stories, embeds, analytics)

- Build and maintain Story Builder, the drag-and-drop Vue editor agencies use to design responsive, MLR-compliant Stories; shipped the Lottie animation player component and the analytics integration that reports engagement from every Story.
- Built the Webframe and Player as Vue 3 + TypeScript custom elements so clients embed Story galleries and playback on any site with one script tag, including visit tracking, campaign attribution, and Google Analytics integration.
- Develop .NET/C# services and data access against MongoDB and MySQL, including performance work on backend query logic for client and agency sites.
- Own CI/CD on AWS CodePipeline (and Bitbucket Pipelines previously) for platform deployments.
- Triage and resolve bug tickets across the platform, reducing turnaround on customer-reported issues.
- Train interns on platform SDKs and workflows, shortening onboarding.
- Use Claude, ChatGPT, and GitHub Copilot daily for code generation, review, and refactors across parallel projects.

Software Engineer, NAPA Auto Parts

Jan 2022 – Feb 2022 · Cambridge, OH

- Built a customer invoice portal (React, Firebase Auth, Firestore) with a Python OCR pipeline (pytesseract) that extracts invoice number, date, and total from scans, cutting weekly invoicing for a major account to scan-and-upload and retaining the account.

Software Engineer (Contract), ACI Services

Jan 2019 – Feb 2021 · Cambridge, OH

- Built an ASP.NET MVC / SQL Server OEM quoting site that aggregates cost, assembly, and margin data across databases; average quote time dropped from days to hours and the sales team quotes from one source of truth.
- Built a browser-based tag printer tool (jQuery, JavaScript, Java, SQL) that lets shop techs lay out laser-etched compressor labels and save templates directly to the label database, removing the designer from the loop.
- Owned all project code end to end, working with a senior developer and project stakeholders on requirements and revisions.

Store Manager, NAPA Auto Parts

Apr 2014 – Apr 2022 · Cambridge, OH

Ran daily operations for a retail and commercial parts store before moving into software full time.

SKILLS

Frontend	Vue 3, TypeScript, JavaScript, React, HTML/CSS, Web Components, Lottie
Backend	.NET / C#, ASP.NET MVC, Node.js, REST APIs, Python
Data & Cloud	MongoDB, MySQL, SQL Server, Firebase, AWS, AWS CodePipeline, Bitbucket Pipelines
AI Tools	Claude / Claude Code, ChatGPT, GitHub Copilot, AI-assisted code generation, prompt engineering
Practices	Git, Agile, unit testing, analytics integration, SDK onboarding and intern training, MLR-compliant pharma tooling

Authorized to work in the US for any employer.
