[Date] · [Hiring Manager], [Company]

Dear [Hiring Manager],

I am applying for the [Role] position at [Company]. I have spent the last four years as a full stack developer at Storysoft and seven years total shipping software that paying customers depend on every day — the kind of work where a feature is not done until someone outside the building is using it.

At Storysoft I build the Story Builder editor, the drag-and-drop Vue tool that healthcare marketing agencies use to design responsive, MLR-compliant Stories, along with the Lottie player component and the analytics integration that reports engagement back from every Story. I also built the Webframe and Player as Vue 3 and TypeScript custom elements, so a client embeds a Story gallery on any site with a single script tag, with visit tracking and campaign attribution included. The work runs the full stack: .NET/C# services and data access over MongoDB and MySQL, performance tuning on backend query logic, and ownership of our CI/CD on AWS CodePipeline.

Before Storysoft I delivered custom software on my own for local businesses, and the habits from it stuck. For ACI Services I built an ASP.NET MVC quoting site that pulled cost, assembly, and margin data into one source of truth and cut average quote time from days to hours. For a group of NAPA Auto Parts stores I built an invoice portal with a Python OCR pipeline that reduced a major account's weekly invoicing to scan-and-upload, which kept the account. I am self-taught and came up through managing a NAPA store, so I am comfortable gathering requirements from non-technical stakeholders and owning a project end to end.

I also work in AI tooling daily — Claude, ChatGPT, and GitHub Copilot — for code generation, review, and refactors. It is how I keep several projects moving in parallel without letting quality slip, and it is a large part of why I ship as much as I do.

[Why this company: one or two sentences on the product, the team, or the problem — reference something specific from the posting or their site.] I would welcome the chance to talk about how I can help.

Thank you for your time and consideration.

Sincerely,

Chris Janke
